

# IMDB Movie Analysis

## Project Description:

We have dataset of different IMDB movies, we need to clean the data, analysis the data and derive the insights from that dataset by using 5 why analysis and create the bar graph and pivot charts for the insights, answer the questions and should create the report.

## Approach:

In order to execute the project, we should download the dataset given and clean the data by removing the duplicate values and null values and by representing the dataset with the bar graphs and pivot tables in order to find the insights.

## Tech stack used:

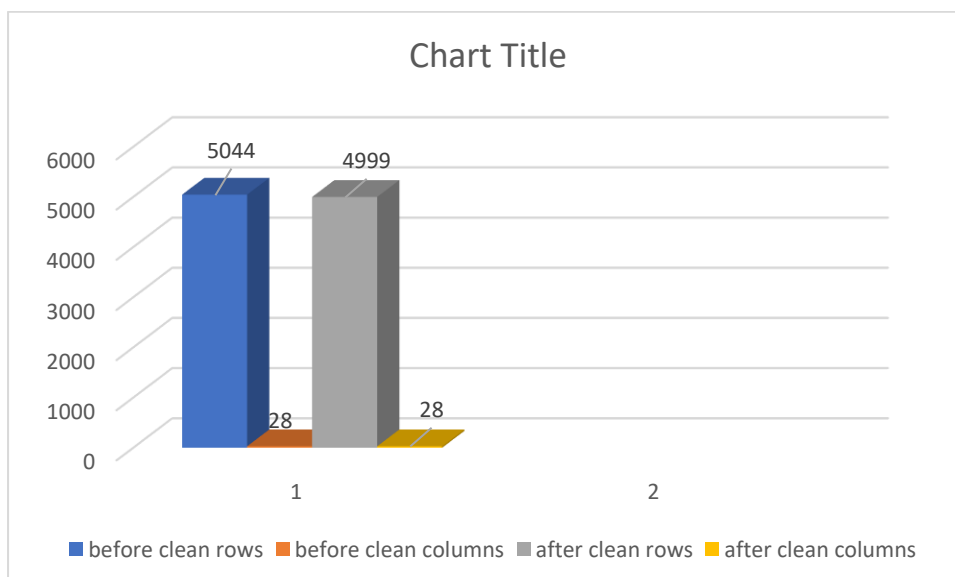

To find the insights we have used excel to represent the graphs and download the dataset in excel, Microsoft word to present the report and google drive to submit the project.

## Insights:

### a. Clean the data:
